### Lubbock Climate

The weather in Lubbock can be volatile and can change quickly. August weather is hot and the evenings are warm.

The weather changes a bit in late September... mornings and evenings are cooler. Wind begins to pick up and it rains more than usual.

By the end of October, days will be mild and nights will be quite cool. Light jackets and sweaters will be needed.

It does get cold in Lubbock during the winter. Prepare for a few days of snow and/or ice.

In March and April, days will usually be fairly warm... with a lot of wind. It rains more than usual during this time, so you may want to bring an umbrella and/or rain jacket.
